

## AMENDMENTS

In the specification:

Please delete the paragraph on page 5, lines 13-22, and substitute therefor:

~~Figure 6 shows~~ Figures 6A and 6B show structures of the defined functionalities in the mixtures found to be derepressors of an XIAP-inhibited caspase in the TPI927 polyphenylurea positional scanning combinatorial library. The chemical name in each box is the reagent from which the R group was derived. Each functional group has the same stereochemistry as the reagent from which it was derived. Figure 6B shows structures 25, 73, 86 and 88. For structures 25, 73, 86 and 88, where the core structure of the molecule is modified, the resulting modified core structure and R group is shown.
